

The ultimate in stacking strength

StackMaster's unique design builds in exceptional strength, enabling it to resist the highest levels of compression of any edge protector product on the market. This allows you to utilize your warehouse space more efficiently by stacking loads higher than ever before.*

Exceptional strength

In addition to stacking loads higher, StackMaster enables you to down gauge to a thinner caliper board and/or leg length without sacrificing load security.

Economical

Because StackMaster is thinner than other edge protectors of comparable strength, we're able to pack more pieces per pallet. This reduces the number of pallets you order, lowers your freight costs and minimizes your warehousing requirements.

Comprehensive load protection

Like our other Angleboard products, StackMaster provides excellent corner protection from damage caused by adjacent loads. And when used in conjunction with strapping, stretch film or netting, StackMaster helps unitize loads and absorb shock to prevent damage during rough handling and transit.

Custom printing

Increase product visibility with customized one or two color printing.

*Actual stacking capacity is application dependent.
